CONNECTWISE

Variable Set: Current ClientID Variable Function

Overview

This article describes the ConnectWise Automate® Variable Set: Current ClientID Variable script function. The Variable Set: Current ClientID Variable function assigns the client ID, of the computer on which the script is running, to the variable. This function runs on the server.

Variable Set: Current ClientID Variable

Parameters

- **Set Type:** Select Current ClientID from the drop-down.
- **Parameter:** N/A
- **Variable Name:** Variable name without @.

Examples

Example #1: Assigns the ClientID to the variable Output1.

Parameters:

- **Set Type:** Current ClientID
- **Parameter:** N/A
- **Variable Name:** Output1

Using the Function Example in a New or Existing Script

1. From a new or existing script, right-click a line in the **Then** or **Else** section, select **Add** to open the **Edit Script Step** window.
2. Select **Variable Set** from the **Function** drop-down.
3. Select **Current ClientID** from the **Set Type** drop-down.
4. Leave the **Parameter** field blank.
5. Enter **Output1** into the **Variable Name** field.
6. Click **Save Step** to save this step and close the window.
